Third Brake Lights
LED Technology

LED's will last up to 80 times longer than incandescent bulbs since LED contain no filament

An LED third brake light will give you much greater illumination in your truck bed making nighttime access safer and easier

Add safety with the new brake lights' super bright red LED's alerting fellow drivers when you hit the brakes

Installing the new LED brake lights is a snap

All LED third brake lights are DOT/SAE approved

Treat yourself to an inexpensive, highly functional and awesome upgrade by installing a new LED third brake light

Lights brighter for added safety

Can handle the roughness of everyday driving ... in all conditions

It's so easy, simply remove your vehicle's stock 3rd brake light, unplug it from the stock wiring, plug in your pre-wired LED 3rd brake light, replace the screws (in the stock location) and you're done. It really is that easy to add this modern look of a real LED 3rd brake light to your vehicle.

Remove the 2 screws located at the end of the brake light. Save screws for the after marker light. After removing the screws pull the brake straight out.

Remove the plastic clips which holds the wire harness to cab to have more play from harness. Twist and pull the sockets out of the stock brake light housing.

Remove the bulb from the center socket. Caution: Bulb may be hot!

Connect the LED pigtail to the socket, making sure the wires match up green to green and black to black. Install the cargo lights into the LED housing.

Install te screws on each side.

Make sure all functions are working properly before driving the vehicle.
